

Assignment -1

Python Programming

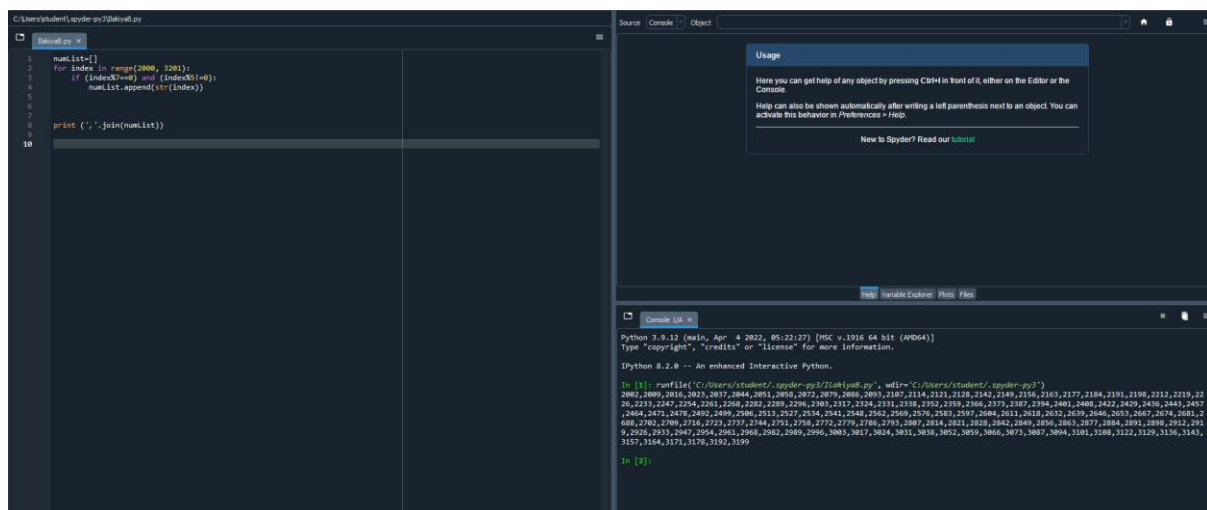

Assignment Date	19 September 2022
Student Name	ILAKIYA B
Student Roll Number	412419205031
Maximum Marks	2 Marks

Question-1:

Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line.

Solution:

```
numList=[]
for ind in range(2000, 3201):
    if (ind%7==0) and (ind%5!=0):
        numList.append(str(ind))
print(','.join(numList))
```

The screenshot shows a Jupyter Notebook interface. The left pane displays the Python code for finding numbers divisible by 7 but not by 5 between 2000 and 3200. The right pane shows the output of the code, which is a long comma-separated string of numbers. The output is displayed in a console window at the bottom of the right pane.

```
numList=[]
for ind in range(2000, 3201):
    if (ind%7==0) and (ind%5!=0):
        numList.append(str(ind))
print(','.join(numList))
```

In [2]:

Question-2:

With a given integral number n, write a program to generate a dictionary that contains (i, i*i) such that is an integral number between 1 and n (both included). and then the program should print the dictionary.

Suppose the following input is supplied to the program:

8

Then, the output should be:

{1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64}

Solution:

```
num=int(input())
diction=dict()
for ind in range(1,num+1):
    diction[ind]=ind*ind
print(diction)
```
